Certification Detail

Entries in the table below indicate the minimum update to Oracle Linux certified with this server, and the minimum errata level of each supported release of the Unbreakable Enterprise Kernel (UEK). Subsequent Oracle Linux updates, and subsequent errata of each major UEK release, are also supported on the server unless otherwise noted. In the case of server certifications with multiple major UEK releases with this release of Oracle Linux, separate entries for each major UEK release will be present.

Status	Min Update Release	Kernel ⓘ	Cert Date ⌵	Cert Notes
Certified for Joint Support	Oracle Linux 8.6	5.15.0-6.80.3.1	2023-03-02	Systems configured with a PERC12 adapter should update to UEK Release 7 version 5.15.0-6.80.3.1 or later.
Certified for Joint Support	Oracle Linux 8.6	5.4.17-2136.315.5	2023-02-24	Systems configured with a PERC12 adapter should update to UEK Release 6 version 5.4.17-2136.315.x or later.

Definitions Of Status

*Certified for Joint Support:* Oracle Linux was tested on the server environment with the participation and/or approval of the server environment partner, and both Oracle and the partner fully support the environment. Customers deploying Oracle Linux on these server environments benefit from streamlined joint support. If a customer with an Oracle Linux Support subscription encounters any problem with Oracle Linux that involves the underlying server environment, the customer can open a service request with Oracle Support.

*Certified for Oracle Support:* Oracle Linux was tested with the same standards as Certified for Joint Support and Oracle fully supports Oracle Linux on these server environments; however, a collateral support program is not in place with the partner for this server environment, and the partner may not consider this a supported environment. Oracle Linux support subscriptions are available to customers. Oracle will provide support for Oracle Linux running in the server environment, but a resolution to issues related to underlying drivers or other platform-specific issues cannot be guaranteed.
